Process FMEA (PFMEA)

Find where each process step could fail, how bad that would be, and what stops it, before it happens on the line.

FMEA NUMBER

PROCESS OR LINE

PART NUMBER AND REVISION

PREPARED BY

TEAM

DATE / REVISION

How to use this template

1. Take the steps from your process flow, in order. For each step, ask how it could fail to meet its requirement.
2. For each failure mode, write the effect on the customer, the cause, and the controls you have today. Then score S, O and D using the scales below.
3. Prioritise by RPN (S × O × D), or by Action Priority if your customer follows the AIAG & VDA FMEA Handbook. Always act on high severity first, whatever the total.
4. Re-score after each action, and keep the PFMEA in step with your control plan and work instructions. Add rows or pages as needed.

S Severity, 1 to 10

How bad is the effect if it happens? 10 = safety or legal risk without warning. 7–8 = product doesn't work, customer very unhappy. 4–6 = works but degraded. 1 = no noticeable effect.

O Occurrence, 1 to 10

How likely is the cause, with today's prevention controls? 10 = almost certain. 5–6 = occasional. 1 = prevented by design, for example mistake-proofing.

D Detection, 1 to 10

How likely are today's checks to catch it before it leaves? 10 = no check at all. 5–6 = manual inspection. 1 = automatic check that can't miss.
